Obituary	xvii
Foreword by Frederick Warner	xix
Foreword by Michel Mercier	xxi
Preface	xxiii
Scientific Group on Methodologies for the Safety Evaluation of Chemicals	xxv
Participants of the Workshop	xxvii

PART A JOINT REPORT

1 Introduction, General Conclusions and Recommendations	3
1.1 Introduction	3
1.2 General Conclusions	4
1.3 General Recommendations	5
2 Methods for Estimating Exposure to Chemicals	7
2.1 Introduction	7
2.2 Identification and Assessment of Sources of Environmental Chemicals	9
2.3 Approaches to Exposure Estimation	9
2.4 Environmental Transport and Distribution	12
2.4.1 Environmental Modelling	12
2.4.1.1 Air Dispersion Models	13
2.4.1.2 Aquatic Transport Models	13
2.4.1.3 Food-chain and Ecosystem Models	14
2.4.1.4 Chemical Transformation and Speciation	14
2.4.1.5 Validation and Credibility of Models	15
2.4.2 Environmental Monitoring	16
2.5 Behaviour of Chemicals in the Organism	18
2.5.1 Metabolic Models	18
2.5.2 Biological Monitoring	19
2.5.2.1 Health-related Biological Monitoring	20
2.5.2.2 Use of Biological Monitoring (Bioanalysis) for Estimating Exposure	21
2.5.2.3 Use of Biological Monitoring (Bioanalysis) for Predicting Health Effects	22

2.6	Conclusions	23
2.7	Recommendations	24
2.8	References	25
3	Methods for Quantitative Estimation of Risk from Exposure to Chemicals	29
3.1	Introduction	29
3.2	Carcinogenesis and Mutagenesis	29
3.2.1	Cellular and Molecular Basis of Quantitative Risk Estimation	31
3.2.1.1	Genetic Effects	31
	Types of Mutations	31
	Measurement of Mutations	32
3.2.1.2	The Process of Carcinogenesis	33
	Multistage Nature of Carcinogenesis	33
	Initiation and Promotion	35
	Probability of Mutagenesis and Malignant Transformation at the Cellular and Molecular Levels	37
3.2.1.3	Conclusions	38
3.2.1.4	Recommendations	39
3.2.2	Laboratory Models for Carcinogenesis and Mutagenesis	40
3.2.2.1	Long-term Whole-animal Assays as Predictors of Chemical Carcinogenesis in Man	41
	Purpose of Tests and Selection of Models	42
	Variability Factors	44
	Quantification of Dose	45
	Quantification of Response	46
3.2.2.2	Quantitative Comparisons of Data from Different Short-term Tests for Carcinogenicity	48
	Type of Tests Considered	48
	Selection of Tests	48
	Metabolic Activation	48
	Qualitative Aspects	48
	Quantitative Aspects	49
	Availability of Data	49
3.2.2.3	The Use of Potency Estimation from Short-term Tests to Predict Potency in Long-term Rodent Studies	49
	Potency Estimation in Rodent Studies	49
	Potency Estimation in Short-term Studies	50

	Comparison of Data from the <i>Salmonella</i> Test with Carcinogenic Potency	50
	Comparison of Data from Mammalian Cell Mutation Assays with Carcinogenic Potency Other Test Systems	51
	Utility of Short-term Test Data	51
3.2.2.4	Conclusions	51
3.2.2.5	Recommendations	52
3.2.3	Epidemiology, Statistics and Mathematical Modelling	52
3.2.3.1	Estimation of Dose–Time–Response Relationships from Epidemiological Studies	53
	Assessment of Genetic Effects	54
	Estimation of Cancer Risk	55
3.2.3.2	Dose–Response Models	59
3.2.3.3	The Use of Different Models of Carcinogenesis	60
3.2.3.4	Low-dose Extrapolation and Risk Assessment	64
	Selecting a Model for Age and Time Dependence as a Basis for Extrapolation	64
	Selecting a Dose–Response Model	65
3.2.4	Practical Applications	67
3.2.5	Conclusions	69
3.2.6	Recommendations	70
3.3	Risk Estimation for Other Toxicological Endpoints	72
3.3.1	Current Practice	72
3.3.2	Approaches to Quantitative Risk Estimation	73
3.3.3	Presentation of Risk Estimates	76
3.3.4	Conclusions	76
3.3.5	Recommendations	77
3.4	References	78
4	Approaches to Measuring Chemical Injury in Non-human Biota and Ecosystems	85
4.1	Introduction	85
4.2	Stepwise Approach to Testing	86
4.3	Single Species Tests	86
4.3.1	Basic Tests	86
4.3.2	Additional Species and Ecosystem Process Tests	88
4.3.3	Tests for Reproductive Capacity and Other Long-term Tests	90
4.4	Multispecies Tests	91
4.4.1	Potential Tests for Competition	92
4.4.2	Potential Predator–Prey Test Systems	93

4.4.3	Grazing Tests	95
4.4.4	Mutualistic Interactions	95
4.4.5	Ecosystem Test Models	95
4.4.5.1	Types of Test Models	96
4.4.5.2	The Microcosms as a Testing Tool in Ecosystem Toxicology	97
4.5	Tests at the Ecosystem Level	98
4.6	Ecotoxicological Modelling	101
4.7	Conclusions	101
4.8	Recommendations	102
4.9	References	103

PART B CONTRIBUTED CHAPTERS

Exposure Estimation	109
<i>B. G. Bennett</i>	
Individual Exposure and Biological Monitoring	123
<i>Jerzy K. Piotrowski</i>	
Molecular and Cellular Mechanisms in Carcinogenesis by Alkylating N-Nitroso Compounds: Pulse Carcinogenesis by N-Ethyl-N-Nitro- sourea in the Developing Rat Brain as a Model System.	135
<i>M. F. Rajewsky</i>	
Cellular and Molecular Mechanisms of Tumour Promotion and their Implications for Risk Assessment	155
<i>Hiroshi Yamasaki and I. Bernard Weinstein</i>	
Implications for Risk Assessment of Genotoxic and Non-genotoxic Mechanisms in Carcinogenesis.	181
<i>J. E. Trosko and C. C. Chang</i>	
Use of Quantitative Cell Transformation Assays in Risk Estimation	201
<i>J. Carl Barrett and David G. Thomassen</i>	
Comparability of In Vitro and In Vivo Systems for Carcinogenesis Evaluations in Different Species, Tissues and Cells	235
<i>Umberto Saffiotti</i>	
A Comparison of the Potency of the Mutagenic Effect of Chemicals in Short-term Tests with their Carcinogenic Effect in Rodent Carcinogenicity Experiments.	247
<i>I. F. H. Purchase</i>	
Laboratory Models in Carcinogenesis Based on Life-span Long-term Bioassays	271
<i>Cesare Maltoni</i>	
The Comparative Potency Method: an Approach to Quantitative Cancer Risk Assessment	281
<i>Roy E. Albert</i>	

The Use of Epidemiological Data to Assess Human Cancer Risk . . .	289
<i>Bruce Armstrong</i>	
Epidemiological Studies to Estimate Effects of Low-level Exposures	303
<i>Kenneth P. Cantor</i>	
Epidemiological Studies of Germ Cell Mutation in Human Populations with Particular Reference to Groups with Unusual Chemical Exposures	327
<i>James V. Neel, Yukio Nishimoto, Kazuaki Goriki, Chiyoko Satoh, Mikio Fujita and Y. Yoshimoto</i>	
Chemicals: a Possible Cause of Genetic Disorders	343
<i>N. P. Bočkov and Yu. I. Kundiev</i>	
Mathematical Dose-Response Models and their Application to Risk Estimation	347
<i>David G. Hoel</i>	
Some Problems in Dose-Response Estimation in Cancer Epidemiology	361
<i>Julian Peto</i>	
Risk Estimation Models	381
<i>N. E. Day</i>	
Methods for Quantitative Cancer Risk Estimation Currently Used in the USSR	395
<i>N. Ya. Janyševa, I. A. Černičenko and N. V. Balenko</i>	
Quantitative Approaches in Use in the United States to Assess Cancer Risk	405
<i>Elizabeth L. Anderson</i>	
Quantitative Dose-Response Models in Prenatal Toxicology	437
<i>Rolf Bass, Diether Neubert, Harry Stötzer and Gerd Bochert</i>	
Quantitative Effects of Chemicals on Fertility	457
<i>Allen J. Wilcox</i>	
Risk Estimation Models Derived from Metabolic and Damage Parameter Variation in a Population	477
<i>Gunnar F. Nordberg and Per Strangert</i>	
Methods for Measuring the Effects of Chemicals on Aquatic Animals as Indicators of Ecological Damage	493
<i>Michael Waldichuk</i>	
Methods for Measuring the Effects of Chemicals on Terrestrial Animals as Indicators of Ecological Hazard	537
<i>Stuart Dobson</i>	
Methods for Measuring the Effects of Chemicals on Aquatic Plants	549
<i>D. Calamari, G. Chiaudani and M. Vighi</i>	
Measurement of Effects of Environmental and Industrial Chemicals on Terrestrial Plants	573
<i>T. T. Kozłowski</i>	

Extrapolation from Single Species Studies to Populations, Communities and Ecosystems	611
<i>D. B. Peakall and R. K. Tucker</i>	
Evaluation of Tests to Predict Chemical Injury to Ecosystems: Microcosms	637
<i>John W. Huckabee</i>	
Index	675
