Contents

Foreword by the President of SCOPE xxi
Foreword by Michel Mercier xxiii
Preface xxv
Scientific Group on Methodologies for the Safety Evaluation of Chemicals xxvii
Participants of the Workshop on Short-term Toxicity Tests for Non-genotoxic Effects xxix

PART A JOINT REPORT

Chapter 1 Introduction, General Conclusions and Recommendations 3
1.1 Introduction 3
1.2 General conclusions and recommendations 4
References 5

Chapter 2 Non-specialized Mammalian Cell Cultures for Toxicity Testing 7
2.1 *In vitro* methods for the assessment of general cellular toxicity 7
2.2 End-points 7
2.3 Current limitations and the potential for improved methods 8
2.4 Conclusions and recommendations 8
References 9

Chapter 3 Methods to Detect Toxic Effects in Specific Mammalian Organs and Physiological Systems 11
3.1 Introduction 11
3.2 Constraints in the use of *in vitro* tests for selective effects 22
3.3 Organ-specific cytotoxic effects 23
3.3.1 Skin 23
3.3.1.1 Primary irritation 23

3.3.1.2 Changes in pigmentation 24
3.3.1.3 Phototoxicity 24
3.3.1.4 Dermal sensitization 25
3.3.2 Gastrointestinal tract 26
3.3.3 Respiratory tract 26
3.3.4 Haematopoietic system 27
3.3.5 Immune system 27
3.3.6 Liver 28
3.3.7 Kidney 29
3.3.8 Nervous system 29
3.3.9 Endocrine system 29
3.3.10 Reproductive system 30
3.4 Metabolic and biochemical considerations 30
3.4.1 Endocrine system 30
3.4.2 Reproductive system 31
3.4.3 Nervous system 31
3.4.4 Skin 31
3.4.5 Gastrointestinal tract 32
3.4.6 Lung 33
3.4.7 Liver 33
3.4.8 Haematopoietic system 34
3.4.9 Kidney 34
3.5 Evaluation of effects on differentiation 34
3.5.1 Gut mucosa 36
3.5.2 Liver 36
3.5.3 Kidney 36
3.5.4 Skin 37
3.5.5 Haematopoietic system 37
3.5.6 Immune system 37
3.5.7 Nervous system 37
3.5.8 Reproductive system 37
3.5.9 Future prospects for tests for effects on differentiation 38
3.6 Evaluation of effects on function 38
3.6.1 Cellular function 38
3.6.2 *In vitro* systems 39
3.6.3 Organs and physiological systems 39
3.6.4 Future prospects for tests for effects on function 40
3.7 Practical use of tests for organ/system specific toxicity .. 40
3.8 Conclusions and recommendations 41
3.8.1 Conclusions 41

3.8.2 Recommendations 42
References 42

Chapter 4 Methods to Predict Toxicity 47
4.1 Quantitative structure–activity relationships 47
4.2 Predicting safe levels of exposure to chemicals 48
References 48

Chapter 5 Short-term Tests in Ecotoxicology 49
5.1 Introduction 49
5.2 Single species tests 50
5.3 Multi-species tests 52
5.4 Conclusions and recommendations 53
5.4.1 Conclusions 53
5.4.2 Recommendations 53
References 54

PART B CONTRIBUTED PAPERS

Chapter 6 Conceptual Approaches to Methodology Development 59
Alan M. Goldberg and Andrew N. Rowan
6.1 Introduction 59
6.2 Alternatives in toxicology 62
6.2.1 Acute toxicity testing 62
6.2.1.1 LD50 testing 62
6.2.1.2 Opthalmic irritancy testing 64
6.2.1.3 Dermal toxicity testing 67
6.2.1.4 Other organs 67
6.2.2 Chronic toxicity testing 68
6.3 Conclusion 68
References 69

Chapter 7 Toxicity Tests with Mammalian Cell Cultures 75
B. Ekwall, V. Silano, A. Paganuzzi-Stammati and F. Zucco
7.1 Introduction 75
7.2 Cell culture systems and methods 77
7.3 *In vitro* testing of cell toxicity of chemicals: methodological aspects 80
7.4 Present trends of toxicology investigations with cell culture systems 82
7.4.1 Investigations with specialized cell systems 83
7.4.2 Investigations with non-specialized cells 83
7.4.3 Metabolism investigations 84

7.5 Cell systems as alternatives to whole animal systems for predicting toxic potentials of chemicals with respect to selected end-points 84
7.5.1 Implants 86
7.5.2 Eye and skin irritants 86
7.5.3 Inhalable pollutants 87
7.5.4 Systemic toxicity 87
7.6 *In vitro* cytotoxicity as a criterion for selecting 'priority chemicals' 89
7.7 Future developments 90
References 91

Chapter 8 The Gastrointestinal Tract and Short-term Toxicity Tests 99
Donald Barltrop and Martin J. Brueton
8.1 Introduction 99
8.2 The normal gastrointestinal tract 99
8.2.1 Structure 99
8.2.2 Uptake, transfer and metabolism 100
8.2.3 Immunological considerations 101
8.2.4 Maturational considerations 102
8.2.5 Nutritional considerations 102
8.3 The recognition of toxic effects to the gut 103
8.3.1 Introduction 103
8.3.2 Histological studies 103
8.3.3 Organ weights 104
8.3.4 Gut microflora 104
8.4 Intestinal absorption studies 104
8.4.1 Whole body techniques 104
8.4.2 *In vivo* techniques in animals 105
8.4.3 *In vitro* techniques 105
8.5 Functional studies in man 106
8.5.1 Absorption 106
8.5.2 Mucosal integrity 107
8.5.3 Specific function 107
8.6 Conclusion 107
References 108

Chapter 9 Specific Organ/System Toxicity: the Liver 111
James W. Bridges
9.1 Introduction 111
9.1.1 Vulnerability of the liver 113
9.1.2 Routes of chemical exposure of the liver 113
9.2 *In vitro* models for liver toxicity 114

9.2.1 Effectiveness of *in vivo* animal models for predicting hepatic toxicity in man 114
9.2.2 Methods to assess liver toxicity following *in vivo* tests 114
9.2.2.1 Clinical observations 114
9.2.2.2 Morphology 115
9.2.2.3 Serum biochemistry 115
9.2.2.4 Tissue biochemistry 117
9.2.2.5 Liver function 117
9.2.3 Chemically/surgically manipulated *in vivo* models 118
9.2.3.1 Surgical preparations 118
9.2.3.2 Chemically manipulated models 119
9.3 *In vitro* models 119
9.3.1 Perfused liver 119
9.3.1.1 Perfused organ viability 120
9.3.1.2 Considerations and limitations of perfused liver systems 120
9.3.2 Cell and tissue culture 121
9.3.2.1 Methods of preparation 122
9.3.2.2 Culture viability 123
9.3.2.3 Current and potential *in vitro* techniques using liver cells 124
9.3.3 Cell homogenates and fractions 126
9.3.3.1 Mitochondria 128
9.3.3.2 Lysosomes 129
9.3.3.3 Endoplasmic reticulum 129
9.3.3.4 Reconstituted and purified subcellular systems 130
9.4 Summary 130
9.5 Recommendations 131
Bibliography 132

Chapter 10 The Developing Kidney in Toxicity Tests 135
Lauri Saxén
10.1 Introduction 135
10.2 Development of the metanephric kidney 135
10.2.1 Early morphogenesis 135
10.2.2 Control of early morphogenesis 138
10.3 *In vivo* toxicity studies 140
10.4 *In vitro* methods and toxicity studies 142
10.4.1 Cell cultures 142
10.4.2 Organ culture 144
10.4.3 Effects of xenobiotics on *in vitro* systems ... 145

10.5 Conclusions 148
References 149

Chapter 11 The Skin: Predictive Value of Short-term Toxicity Tests 155
Raymond R. Suskind
11.1 Introduction 155
11.2 Percutaneous absorption 155
11.3 Clinical and pathological patterns of adverse reactions 156
11.3.1 Inflammatory responses 156
11.3.1.1 Primary irritation 156
11.3.1.2 Allergic reactions 157
11.3.1.3 Photosensitization 158
11.3.1.4 Pigment changes 159
11.3.1.5 Pilosebaceous reactions 159
11.3.1.6 Eccrine sweat gland reactions 160
11.3.1.7 Other tissue components 160
11.4 Tests for the assessment of cutaneous toxicity and reactions 161
11.4.1 Dermal toxicity 161
11.4.2 Methods of assessment of skin penetration 161
11.4.3 Primary irritation 162
11.4.4 Immunologic reactions 163
11.4.5 Assay methods for phototoxicity and photoallergenicity 166
11.4.6 Methods for assessing the effects of xenobiotics on melanin in the skin 168
11.4.7 Assessment of toxic effects on the philosebaceous structures 169
11.4.8 Chemically-induced acne 170
11.5 Discussion and strategy for testing 171
References 172

Chapter 12 Evaluation and Prediction of Chemical Toxicity using Haematopoietic Cell Renewal Systems 177
T. M. Fliedner, H. Heit and G. Pabst
12.1 Introduction 177
12.2 Haematopoietic cell renewal systems 178
12.3 *In vivo* haematopoietic test methods 180
12.3.1 General considerations 180
12.3.2 Blood cell counts and smears 181
12.3.3 Bone marrow studies 182
12.3.4 Functional test systems 183

12.4 *In vitro* test systems 185
12.5 Examples of haematotoxic compounds 186
12.5.1 Benzene 186
12.5.2 Lead 187
12.6 Simulation models 187
12.7 Summary 189
References 190

Chapter 13 Short-term Tests for Neurotoxicity 193
Silvio Garattini
13.1 Introduction 193
13.1.1 The role of the blood/brain barrier 193
13.1.2 The role of metabolism 194
13.1.3 Compensatory mechanisms 195
13.1.4 Difficulties in establishing short-term tests for neurotoxicity 196
13.2 Nervous system culture types 196
13.3 Electrophysiological methods 199
13.4 Biochemical methods 200
13.4.1 Neurochemical mapping 200
13.4.2 Neurotransmitter biochemistry 203
13.4.3 Behavioural effects 207
13.5 Conclusions 213
References 213

Chapter 14 Methods for Assessing the Effects of Chemicals on the Endocrine System 221
J. H. Clark and F. X. R. van Leeuwen
14.1 Introduction 221
14.1.1 Important human and other mammalian health problems 221
14.1.2 General comments on successes and failures using routine *in vivo* toxicity tests 222
14.1.3 Consideration of particular problems 223
14.2 *In vivo* studies 225
14.2.1 Clinical observations 225
14.2.2 Morphology 225
14.2.3 Biochemistry of tissue and biological fluids . . 226
14.2.4 Function tests 227
14.2.5 Surgically modified animals 229

14.3 *In vitro* testing 229
14.3.1 Thyroid 229
14.3.1.1 Uptake of iodide 230
14.3.1.2 TSH receptor binding 230
14.3.1.3 Oxidation and coupling reaction 230
14.3.2 Adrenal gland 230
14.3.2.1 ACTH receptor interactions 231
14.3.2.2 Lipoprotein uptake by adrenal cells 231
14.3.2.3 Biosynthesis of adrenal steroids and enzyme inhibition 231
14.3.3 Adrenal hormone action at the target cell 232
14.3.3.1 Glucocorticoids 232
14.3.3.2 Mineralocorticoids 233
14.3.4 Hypothalamic–pituitary system 233
14.4 Strategy and future developments 235
References 235

Chapter 15 Methods for Assessing the Effects of Chemicals on the Immune System 239
J. G. Vos and J. H. Dean
15.1 Introduction 239
15.1.1 Relevant human and other mammalian health considerations 239
15.1.2 General comments on successes and failures using routine *in vivo* toxicity testing 241
15.1.3 Consideration of experimental parameters 242
15.2 *In vivo* studies 243
15.2.1 Clinical observation 243
15.2.2 Morphology 244
15.2.3 Serum analysis 246
15.2.4 Use of surgically-manipulated animals 246
15.2.5 Immune function tests 247
15.2.5.1 Cell-mediated immunity 248
15.2.5.2 Humoral immunity 250
15.2.5.3 Macrophage function 250
15.2.5.4 Natural killer cell function 252
15.2.5.5 Granulocyte function 252
15.2.5.6 Host resistance 252
15.3 *In vitro* studies 255
15.4 Strategy 256
References 257

Chapter 16 Potential Short-term Tests to Detect Chemicals Capable of Causing Reproductive and Developmental Dysfunction .. 263

Carlton H. Nadolney, Neil Chernoff, Robert L. Dixon, Kundan S. Khera, Ralf Krowke, Boris V. Leonov, Diether Neubert and Sonia Tabacova

16.1 Introduction 263
16.2 Effects on the male reproductive system..... 264
16.2.1 Male accessory sex organs 264
16.2.2 Effects on androgen production and androgen receptors..... 265
16.2.3 Effects on sperm 266
16.2.4 Biotransformation of toxicants in testicular tissues..... 266
16.2.5 DNA damage, synthesis, and repair in spermatogenic cells 267
16.3 Effects on the female reproductive system 267
16.3.1 Assessment of oocyte and follicle toxicity ... 267
16.3.2 Effects on ovarian steroid synthesis 268
16.3.3 Receptor interactions..... 269
16.4 Interference with hypothalamic–pituitary function.... 270
16.4.1 Release of hormones from pituitary cells 270
16.4.2 Indirect *in vivo* assays 271
16.5 Effects on fertilization..... 272
16.5.1 *In vitro* heterologous fertilization tests 272
16.5.2 *In vitro* homologous fertilization tests..... 272
16.6 Systems used as pre-screens for reproductive and developmental dysfunction 273
16.6.1 Mammalian *in vivo* tests 273
16.6.2 Mammalian embryo cultures..... 276
16.6.3 Chick embryos *in ovo* used as pre-screens ... 276
16.6.4 Other vertebrate embryo cultures 277
16.6.5 Invertebrates used as pre-screens 277
16.6.6 Organ cultures 277
16.6.7 Tissue culture systems..... 278
16.6.8 Studies with non-embryonic tissues
References..... 279

Chapter 17 Toxicological versus Ecotoxicological Testing..... 287

Guido Persoone and James Gillett

17.1 Analogies and differences between toxicology and ecotoxicology..... 287

17.2 Exposure assessment versus effects (hazard) assessment 288
17.3 Terrestrial versus aquatic environments 288
17.4 The necessity for and difficulty of testing at different levels of biological organization. 289
17.5 Single species tests 292
17.6 Necessity of exposure evaluation 294
17.7 'Short-term' ecotoxicologic assays 296
References 298

Chapter 18 Possibilities and Limitations of Predictions from Short-term Tests in the Aquatic Environment 301
Guido Persoone, David Calamari and Peter Wells
18.1 Introduction 301
18.2 Prediction of acute poisoning in the field 301
18.3 Prediction of toxicity in different physicochemical conditions 302
18.4 Prediction of toxicological relationships among different species 302
18.5 Predictive value of acute toxicity data for chronic toxicity. 304
18.6 Tests with developmental stages of fish for predicting long-term toxicity 305
18.7 Predictions based on the shape of toxicity curves . . . 305
18.8 Predictions on the basis of chemical structure 307
18.9 Prediction of bioconcentration factors 308
18.10 Use of toxicokinetics for predictive purposes 308
18.11 Relevance of short-term tests for the definition of water quality criteria 308
18.12 Conclusions 309
References 310

Chapter 19 Possibilities and Limitations of Short-term Tests for Ecotoxicologic Effects: Terrestrial Approaches 313
James W. Gillett
19.1 Introduction 313
19.2 Past and present approaches to terrestrial ecotoxicology 313
19.2.1 Animals 313
19.2.1.1 General considerations 313
19.2.1.2 Bioaccumulation 315
19.2.2 Plants 316
19.2.3 Microcosms 317

19.3 Future trends for short-term testing in terrestrial ecotoxicology 318
19.3.1 General considerations 318
19.3.2 Structure–activity relationships 319
19.3.3 Generalized toxicity tests 320
19.3.4 Microcosm studies 321
19.4 Conclusions 322
References 323

Chapter 20 Predicting Safe Levels of Chemicals 325
I. V. Sanockij
20.1 Introduction 325
20.2 Limitations in extrapolating the results of traditional toxicology to man 325
20.2.1 Variation in toxicity with route of exposure . . 325
20.2.2 Variation with age and size 326
20.2.3 Variations in species sensitivity 326
20.2.4 Extrapolation of animal results to man 328
20.3 Methods for establishing safe levels of occupational exposure via inhalation 331
20.3.1 Molecular structure 332
20.3.2 Physiochemical properties 332
20.3.3 Biological activity 334
20.4 Conclusion 337
Bibliography 337

Chapter 21 Computer-aided Chemical Structure-handling Techniques in Structure–Activity Relationship Systems 339
Josef Friedrich, Wolfgang Schubert and Ivar Ugi
21.1 Introduction 339
21.2 Structure-handling techniques 339
21.2.1 General considerations 339
21.2.2 Structural features 340
21.2.3 Feature selection 341
21.3 Design of a structure–activity correlation system 342
21.3.1 Design features 342
21.3.2 System performance 343
21.4 Acknowledgements 343
References 344
